

## The Problem

Children increasingly spend time on passive screen-based content.

Many learning apps focus on academics, videos and screen-based games.

Parents need a simple way to encourage cognitive development, communication, confidence and positive social behaviors.

Parents also lack an easy way to understand how their child's skills are developing over time.

## The Solution

15-minute daily missions designed for active participation.

Adaptive AI adjusts challenge difficulty based on the child's previous performance.

AI-generated activities provide age-appropriate cognitive and social challenges.

Gamification through stars, badges, levels and adventure worlds keeps children engaged.

Parent dashboard provides weekly progress summaries and AI-generated developmental insights.

## Key Benefits

Builds cognitive and interpersonal skills

Turns screen time into purposeful time

Personalized and adaptive learning journey

Encourages positive social behaviors

Gives parents visibility and peace of mind

## How KidVenture Works

An AI-powered journey from play to progress

"Every child has a unique journey, we're here to guide it."

## Technology Stack

OpenAI API

AI-generated activities, evaluation

Lovable / Replit

Web app UI and frontend

Supabase

Database, user profiles, progress

Make.com

Automation, workflow, reports

Postman

API testing and integration

## MVP Features

Child onboarding and profile setup

AI-generated daily missions (15 minutes)

Learn • Create • Connect activity library

Gamification (stars, badges, levels)
